

**Do you send confidential
Information to vendors?**

Confidential information sent to vendors is at the mercy of the vendors' systems and processes. Malicious intent, errors, omissions & lack of awareness on behalf of the vendors could make this information publicly available leading to monetary and reputation losses

SECLORE FILESECURE

Share with Confidence !

Seclore FileSecure protects information from leakage by external agencies by allowing enterprises to retain control of the information post distribution. This means that confidential information remains confidential when it goes out of the enterprise.

Seclore FileSecure allows enterprises to define and implement information usage policies. A policy is an "answer" to four Questions i.e.

🔒 **WHO** can use the information

People & groups within and outside of the organization can be defined as rightful users of the information

🔒 **WHAT** can each person do

Individual actions like reading, editing, printing, distributing, copy-pasting, screen grabbing etc. can be controlled

🔒 **WHEN** can he use it

Information usage can be time based e.g. can only be used by Mr. A till 25th Sept or only for the 2 days

🔒 **WHERE** can he use it from

Information can be linked to locations e.g. only 3rd floor office by private/public IP addresses

When sharing information with external agencies, Seclore FileSecure allows the control of the information to be retained by the owner and can significantly reduce the delays and costs associated with system and process audits.

Seclore Technology (incubated and promoted by IIT, Bombay) is a leading provider of information security solutions in the areas of information usage control, information rights management (IRM) and secure outsourcing. Its expertise lies in protection of data post distribution irrespective of its location or mode of transfer.
