PARTNER NETWORK

Rapidly Embed Seclore's Data-Centric Security Offering

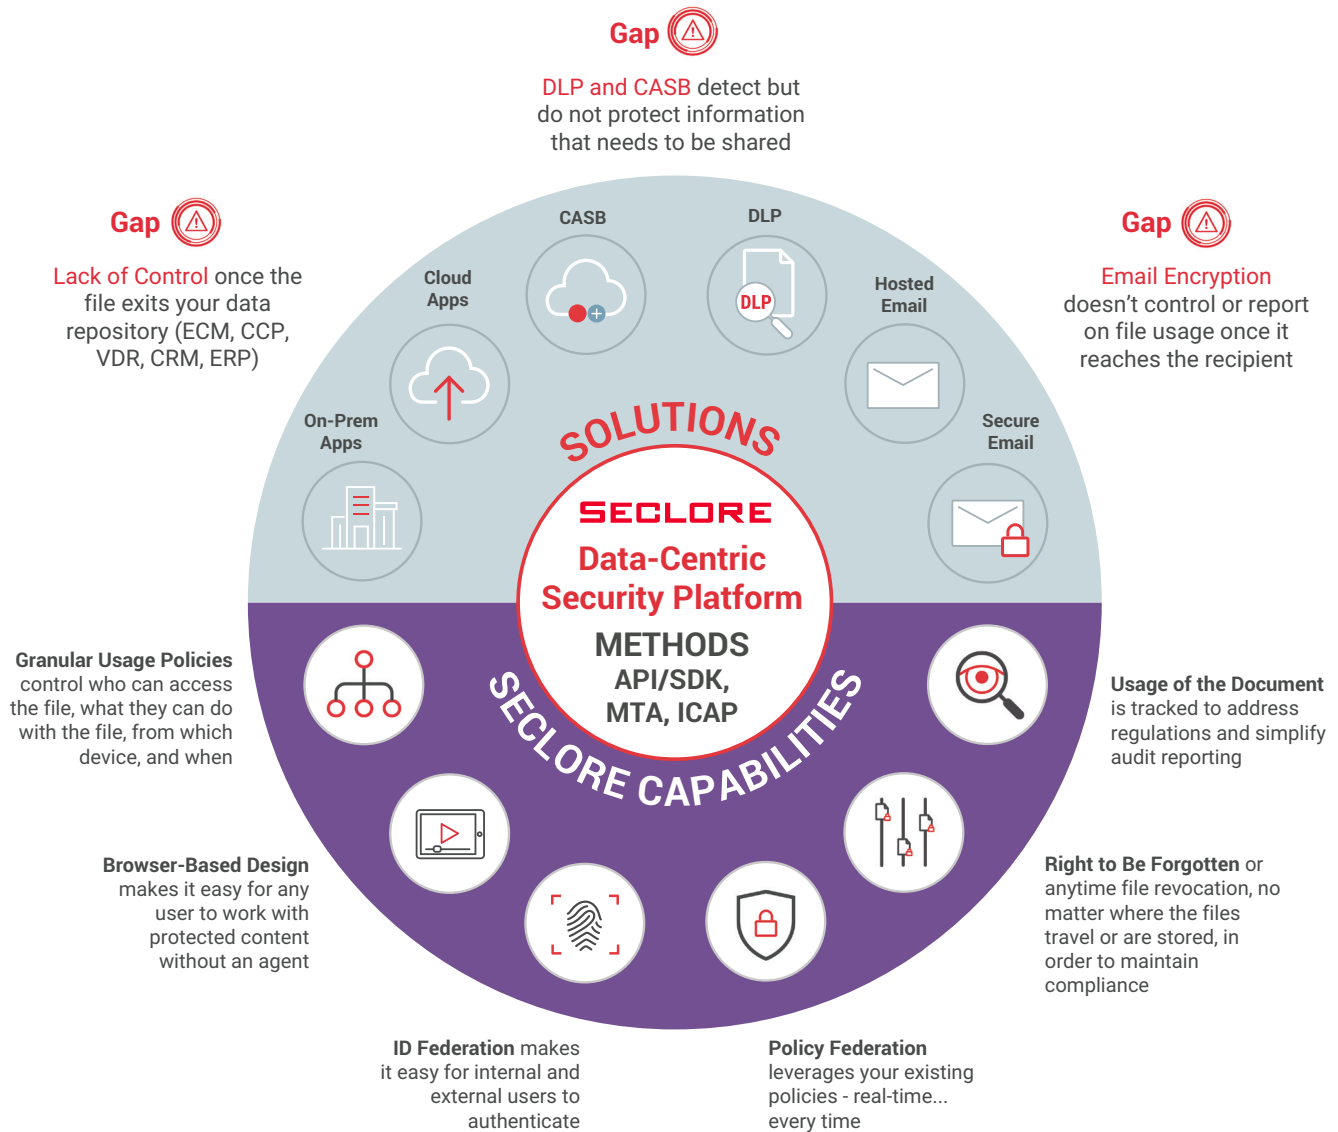

Seclore makes it easy to OEM and seamlessly embed Data-Centric Security within your solution

Seclore Data-Centric Security is OEM-Ready

Many existing solutions have gaps when it comes to fully protecting and tracking information wherever it travels, including while a document is open and being utilized.

Seclore automatically adds persistent, granular usage controls as files are detected, shared or downloaded to ensure information remains secure wherever it travels.

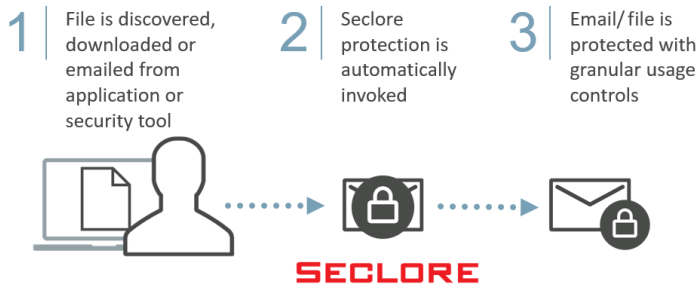

Adding Seclore Data-Centric Security to Your Solution is as Easy as 1-2-3

Seclore's experienced team and robust tools make it easy for you to add Data-Centric Security to your solution with minimal effort.

How the Seclore Data-Centric Security Platform Works

As documents are downloaded, shared via email or discovered, the Seclore Data-Centric Security Platform can be automatically activated to apply granular usage controls that have been associated with the file and recipients.

Persistent, Granular Usage Controls

Seclore provides the most comprehensive Data-Centric Security for an organization's sensitive information, going well beyond traditional file and email encryption solutions.

Stand Out From the Crowd with Data-Centric Security

With new information sharing technologies, BYOD, and Shadow IT on the rise, securing information wherever it travels, along with the need to support secure external collaboration is paramount to maintaining regulatory compliance. The Seclore Data-Centric Security Platform solution can be rapidly embedded into your offerings to provide persistent, granular usage controls and tracking – closing the last-mile security gap.

Toolkit for Streamlined Integration

With easy-to-use APIs, ready-made interfaces and other resources, you can make Seclore Data-Centric Security a seamless part of your solution in days, not weeks or months. Through the integration, Rights Management is transparent to end users and quickly becomes a differentiating feature within your offering.

Web-Service APIs & Client-Side SDKs

Seclore exposes the complete set of APIs as RESTful Web Services so that they can be called from any platform or device. All service calls are secured via built-in web service authentication controls. Client-side SDKs provide language-specific bindings and helper libraries to accelerate development. The SDK is available in Java and .NET.

User Authentication Services

Seclore provides ready-made interfaces for integrating with any other system for authentication. This can be most useful when you wish to use an existing system (e.g. ERP, ECM, VDR) for end-user authentication.

Mail Transfer Agent (MTA)

Enhance existing Secure Email offerings by simply redirecting to Seclore's MTA. Automate protection through configuration, leveraging the X-Header or other meta-data properties.

Real-Time Policy Enforcement

When the end user opens the file, Seclore queries the enterprise system in real time to obtain the latest access permissions for that file.

Browser-Based Security

Seclore can be integrated with solutions as a secure, online web-based interface. Files in the solution automatically open in the browser – without installing software.

About Seclore

Seclore offers the market's first browser-based Data-Centric Security Platform, which gives organizations the agility to utilize best-of-breed solutions to discover, identify, protect, and analyze the usage of data wherever it goes, both within and outside of the organization's boundaries. The ability to automate the Data-Centric Security process enables organizations to fully protect information with minimal friction and cost. Over 2000 companies in 29 countries are using Seclore to achieve their data security, governance, and compliance objectives.

Learn how easy it now is to keep your most sensitive data safe, and compliant.
