### Risks with Adopting MS Cloud

**Lack of Data Visibility**

**Inability to Control Data**

**Cloud Data Theft**

Cloud services adoption is increasing, and Microsoft is leading the pack. Microsoft does data security with Microsoft Information Protection (MIP), which organization tend to try. But it does not provide enough security for your data leading to data breaches and risk exposure.

## Adopt a **Data-Centric Security Solution** curated by the security experts

### Most Secure

Never been Hacked  
Independently security tested everyday

### Enhanced Security with Automation

Protect millions of documents a day  
Minimize user and admin overheads

### It Just Works

Works with your existing data sharing and security tools (Microsoft or Others)  
Widely used for B2B collaboration
