

Are You at Risk of Data Loss Because of Careless Insiders?

Insider threats are the security risks originating from within a targeted organization. The actor may not always be a part of the organization; they may also be ex-employees, business partners, consultants, or board members. Often, the actors are not mindful enough when sharing sensitive information externally. Hence the name, Careless Insiders.

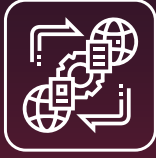

Scenarios

Board members
Board member sharing board meeting notes with a non-board member

Interns
Intern sharing employee, HR, and payroll data with the wrong agency

Employees
Employees sharing company financial data with the entire organization

Vendors
